

Return and Refund Policy

1.1 B2B Operations

- All volume-based fleet, logistics, industrial, and government deliveries are treated as final once delivery is completed and accepted at the delivery site, including by signed delivery order, electronic acknowledgment, or other recorded custody transfer.
- Because every batch is supplied as ISO 22241-compliant AdBlue at the point of transfer, BlueDiesel does not accept returns of opened, unsealed, partly used, tampered, or contaminated storage units, including IBC totes and drums, due to chemical purity and contamination risks.
- Where required by applicable law, or where BlueDiesel verifies a documented delivery shortfall, wrong product, or contamination attributable to BlueDiesel before the product is used, BlueDiesel may, at its option, replace the product, issue a credit note, or provide another legally appropriate remedy.

1.2 Kiosk and Retail Dispenser Operations

- All AdBlue dispensed directly from a kiosk, pump, or automated dispensing nozzle into a vehicle tank or approved external container is final once the product exits the nozzle. For contamination-control reasons, dispensed product cannot be pumped back, extracted, or returned.
- Customers are charged only for the actual volume successfully dispensed. If a payment hold, wallet hold, pre-authorization, or contactless authorization exceeds the final amount dispensed, the unused amount will be automatically released, reversed, or refunded to the original payment source or wallet balance, subject to bank, card-scheme, e-wallet, or payment-terminal processing timelines.
- If a transaction fails, dispenses no product, or results in a duplicate or incorrect charge due to a verified system error, customers should contact BlueDiesel within 14 days of the transaction date. Verified billing errors will be corrected using the original payment channel, wallet credit, or another lawful remediation method.

This policy does not exclude any rights that cannot be excluded under applicable Malaysian law.
